

**D B ASSEMBLY, INC. AVIONICS APU
TYPE P-2850A
50 AMP POWER SUPPLY**

**MADE IN
THE
USA**

The D B ASSEMBLY, INC. P-2850A Aircraft Ramp Power Supply aircraft flight line service and maintenance tool. The unit has a filtered 28 volt DC power supply with up to 50 amperes capability for tests of aircraft electrical systems and a secondary mode for recharging run-down batteries.

This ramp or hangar accessory is an absolute must for avionics service, gear and flap actuator exercising and other electrical system service.

The P-2850A plugs directly into the aircraft APU connector and is tied to the electrical system when the master switch is activated.

Other units in the D B ASSEMBLY, INC. family of aircraft power supplies and battery chargers include the P-28100 (28volt, 100 amps power supply only) and the P-2850A (28 volt, 50 amps power supply only). These models are also available in 14 volts. Another model is the R-14/28-25 dual DC output voltage 14 or 28 volt, 25 amps. All APU models come with a filtered DC output voltage to eliminate humming noise.

FEATURES

- 50 amperes filtered 28 volt supply
- Aircraft APU connectors furnished
- Operates from 115 VAC, 60 Hz
- AC circuit breaker included
- 7 foot DC cable furnished
- Weighs only 46 pounds. Portable
- Ferro-resonant regulated supply
- One year warranty
- Extensive testing by FBO's

All models also available in 230vac, 50HZ CE certified
